Add ALT Text in Moodle

Alternative text ("alt-text") is descriptive text added to an image. This text is read by special screen-reading software that describes the page to individuals who may have vision difficulties.
It is important to include alt-text (even if it is blank) for all images in order for your Moodle course to be accessible. Check out this [web page](#) from webaim.org for help on writing good alternative text.

How to add alt-text to images in Moodle:

1. Click on the "Edit" button below the Moodle activity/resource that contains the image.

2. Click once on your image to select it.

3. Click on the "edit image" button in the toolbar.

4. Type your alternative text in the "Image Description" field.

5. Click the "Update" button to save your changes to the image, then save your changes in the general editor.

6. Click "Save and return to course" button to return to main course page.
