

### **Record a personal video with Zoom.**

There are plenty of YouTube help videos showing you how to record your own videos with Zoom. [Click here](#) for one that is easy to understand.

#### **Important Notes:**

You can save your videos to a cloud location or to your personal computer. When you save the video, it will automatically create a folder called “Zoom” and place 3 files into the Zoom folder once you stop the recording. (The file that contains the actual video has an .mp4 file extension.)

Once you have the video created and saved, I recommend you upload it to Yuja and then use the embed feature to embed the video into your Moodle course.
